Superior Pro-Gamer Mousepad for Low-Sense Gamers

The RAPTOR-GAMING P4 consists of a flexible foam plastic mat. Its surface is large as compared to the other RAPTOR-GAMING mousepads. This mousepad has been developed especially for gamers with extremely low sense.

The surface is covered by especially coated black high-quality textile material. The RAPTOR-GAMING P4 is suited for the general use of optical and ball mice. The thickness of only 2mm avoids early fatigue of the wrist and therefore, is ideal for extensive deathmatches. The RAPTOR-GAMING P4 is among the most flat pro-gamer mousepads on the market. The complete bottom side is coated with a profiled anti-slip rubber, keeping the mousepad from slipping on any surface.
